N.B. ¹ Figures for 2005 appeared to have been under-reported. Therefore, to adjust for overweight and the number screened, figures from the Department of Public Health School Health Services Annual Report 2004-2005 were used. Additionally, for the school period September to December 2005, the following sources were used for the overweight count; for New Providence, the School Health Services Annual Report 2004-2005; figures for Grand Bahama were estimated from annual aggregate Primary Health Care (PHC) 2005 report figures, and Family Islands figures are directly from the 2005 PHC report.

² Visits by school children; obesity visits for 2005 appear to be under-reported.
